22AIE205 – Introduction to Python

Lab Assignment 2

Name: AKEPATI SATHISH REDDY

Reg.NO: CH.SC.U4AIE25001

Department: AIE 25-29

1 .Problem Statement: **Take no.of users from user and for each user take details such as name,age,salary and calculate tax based on tax regime and store them in seperate lists.**

CODE:

question1.py > ...

```python
#CH.SC.U4AIE25001
#Take no.of users from user and for each user take details such as name,age,salary and tax based on tax regime and store them in s
total_list = []
n = int(input("Enter no.of people: "))
for i in range(0,n):
    details = []
    print("person"," ",i+1)
    name = input("Enter name: ")
    age = int(input("Enter age: "))
    annualIncome = int(input("Enter anual salary: "))
    if(annualIncome<=400000):
            taxAmount = 0

    elif(annualIncome>=400001 and annualIncome<= 800000):
            taxableAmount = annualIncome - 400000
            taxAmount = taxableAmount*(5/100.0)

    elif(annualIncome>=800001 and annualIncome<= 1200000):
            taxableAmount = annualIncome - 400000
            taxAmount = (taxableAmount - 400000)*(10/100.0)+400000*(5/100.0)
    elif(annualIncome>=1200001 and annualIncome<= 1600000):
            taxableAmount = annualIncome - 400000
            taxAmount = 400000*(5/100.0)+400000*(10/100.0)+(taxableAmount - 800000)*(15/100.0)
    elif(annualIncome>1600000):
            taxableAmount = annualIncome - 400000
            taxAmount = 400000*(5/100.0)+400000*(10/100.0)+400000*(15/100.0)+(taxableAmount-1200000)*(20/100.0)

    tax = taxAmount
    details.insert(0,name)
    details.insert(1,age)
    details.insert(2,annualIncome)
    details.insert(3,tax)
    total_list.append(details)
    print()
for list in total_list:
       print(list)
```

OUTPUT:

```
PS D:\SEMESTERs\SEMESTER3\22AIE205-Python\020726Lab\020726Lab\Exercise2> python -u "d:\SEMESTERs\SEMESTER3\22AIE205-Python
Enter no.of people: 3
person   1
Enter name: sathish
Enter age: 19
Enter anual salary: 200000

person   2
Enter name: vivek
Enter age: 18
Enter anual salary: 900000

person   3
Enter name: saman
Enter age: 19
Enter anual salary: 250000

['sathish', 19, 200000, 0]
['vivek', 18, 900000, 30000.0]
['saman', 19, 250000, 0]
```

2 .Problem Statement: **write a program to generate roll number of a student by taking campus,domain,degree,year,branch,year of joining.**

CODE:

question2.py > ...

```python
#write a program to generate roll number of a student  by taking campus,domain,degree,year,branch,year of joining
#CH.SC.U4AIE25001
campus = input("Enter your campus location(city name): ")
school = input("Enter your school name(school of computing/school of engineering): ")
degree = input("Enter your graduation period(Undergraduate or Postgraduate: ")
years = input("Duration in years: ")
depart = input("Enter your department in 3 letters(ex:AIE,ECE,etc..): ")
year_of_joining = input("Enter year of joining: ")
sec = input("Enter your section in number(0-A,1-B,2-C) : ")
roll = input("Enter your 2 digit roll number: ")

campus = campus[0:2].upper()

school = (school[0]+school[10]).upper()

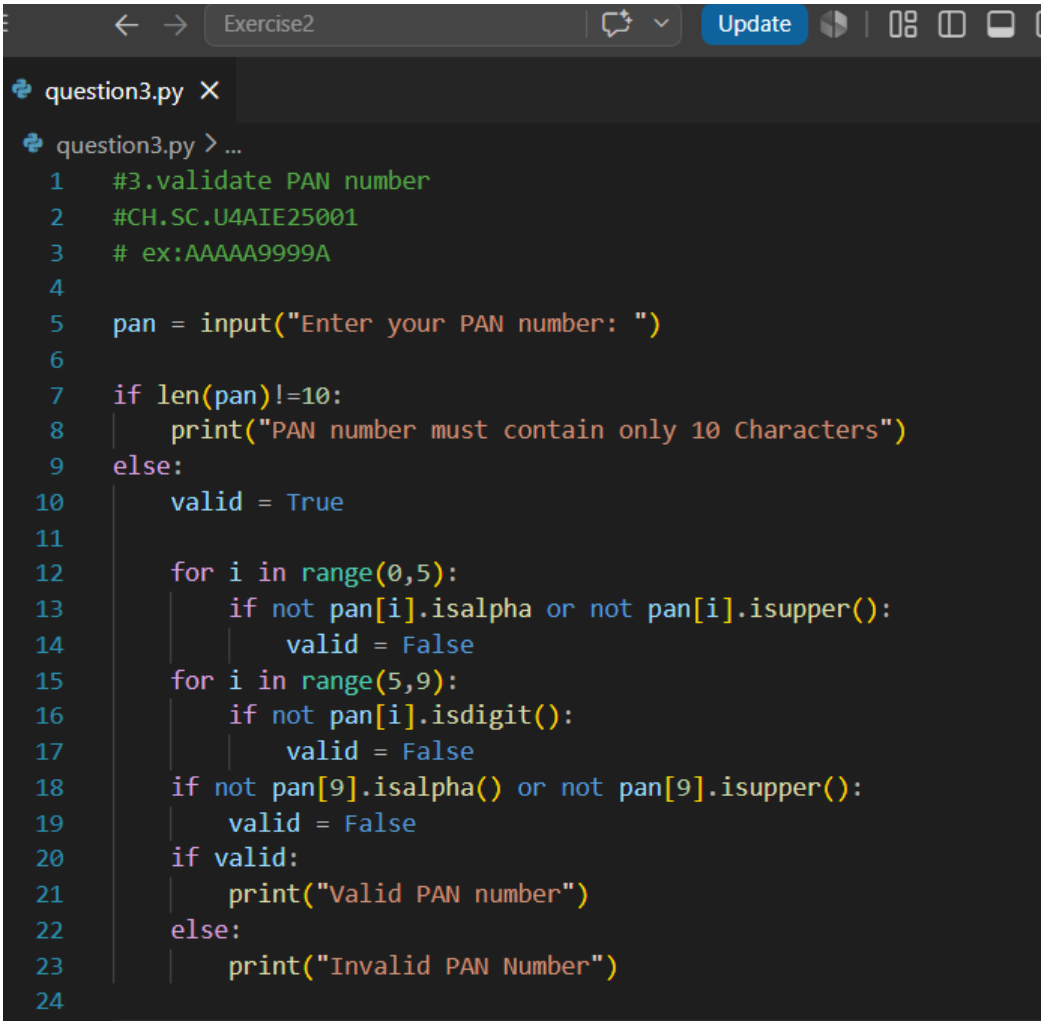

year_of_joining = year_of_joining[2:4]
rollend = ""
rollend = rollend + degree[0].upper()
rollend = rollend + years
rollend = rollend + depart
rollend = rollend + year_of_joining
rollend = rollend + sec
rollend = rollend + roll
print(f"{campus}.{school}.{rollend}")
```

OUTPUT:

```
