22AIE205 – Introduction to Python

Lab Assignment 1

Name: AKEPATI SATHISH REDDY

Reg.NO: CH.SC.U4AIE25001

Department: AIE 25-29

Lab Challenge: Indian Income Tax Calculator (FY 2025-26 - Simplified)

Problem Statement: Develop a Python program to calculate the annual income tax payable by a salaried employee.

The program should:

1. Read Employee Name.

2. Read Annual Income.

3. Read Regime Choice:

- **1 → New Tax Regime**
- **2 → Old Tax Regime**

4. If Old Regime is selected:

- **Read deductions under 80C.**

5. Calculate taxable income.

6. Calculate tax based on slabs.

7. Display detailed tax report.

CODE:

IncomeTaxCalculator.py

180626LAB > IncomeTaxCalculator.py > ...

```python
while 1:

    print("============================================================")
    print("INDIAN TAX CALCULATOR")
    print("============================================================")

    name = input("Employee Name: ")
    annualIncome = float(input("Annual Income: "))
    while annualIncome<0:
        print("Invalid Income")
        annualIncome = float(input("Annual Income: "))
    print()
    print("Select Regime")
    print("1. New Regime")
    print("2. Old Regime")
    choice = int(input("Choice : "))
    taxableAmount = 0
    taxAmount = 0
    cat = ""
    #new Regime
    if(choice == 1):
        if(annualIncome<=400000):
            taxableAmount = 0
            taxAmount = 0
            cat += "No Tax"
        elif(annualIncome>=400001 and annualIncome<= 800000):
            taxableAmount = annualIncome - 400000
